

Cidal effectiveness of Viroklenz™ - MEDAS 36

BACTERIA

Bacillus cereus
Bacillus stearothermophilus
Brevibacterium animonagenes

Chlamydia psittaci
Corynebacterium diphtheriae

Desulfovibrio desulfuricans

Enterobacter aerogenes
Enterobacter cloacae
Enterococcus faecium
Escherichia coli
Escherichia coli (EHEC)

Klebsiella pneumoniae
Klebsiella pneumoniae (MRKP)

Legionella pneumophila
Leuconostoc mesenteroides
Listeria monocytogenes

Micrococcus lysodeiteticus
Mycobacterium smegmatis
Mycobacterium tuberculosis

Proteus mirabilis
Proteus vulgaris
Pseudomonas aeruginosa
Pseudomonas fluorescens

Salmonella abortus equi
Salmonella choleraesuis
Salmonella dublin
Salmonella enteritidis
Salmonella infantis
Salmonella manhattan
Salmonella newport
Salmonella Panama
Salmonella paratyphi
Salmonella schottmuelleri
Salmonella typhi
Salmonella thyphimurium
Serratia marcescens
Shigella dysenteriae
Shigella flexneri
Shigella sonnei

Staphylococcus aureus
Staphylococcus aureus (MRSA)
Streptococcus agalactiae
Streptococcus faecalis
Streptococcus faecalis (MRSF)
Streptococcus pyogenes

Yersinia enterocolitica

FUNGI/YEASTS

Absidia corymbifera
Aspergillus niger
Aspergillus versicolor

Candida albicans
Cladosporium cladosporioides

Microsporium gypseum

Penicillium glaucum
Penicillium verucosum

Saccharomyces cerevisiae

Trichophyton mentagrophytes

ALGAE

Chlorella pyrenoidosa
Chlorella vulgaris

Phormidium faveolarum
Phormidium inundatum (Black Mould)
Phormidium uncinatum
Scenedesmus obliquus

VIRUSES

Hepatitis B
Herpes Simplex
HIV-1 (AIDS)
Influenza
Newcastle Disease
Rubella
Vaccinia
Canine Parvovirus
Poliovirus
Tuberculosis
Adenovirus
Feline Calicivirus (Norwalk Virus surrogate)
